

1) Open Elastic Benstalk

2) Add Details

The screenshot shows the 'Name, review, and create' step in the AWS IAM console. The 'Role details' section contains a 'Role name' field with the value 'nishal' and a 'Description' field with the text 'Allows EC2 instances to call AWS services on your behalf.' Below this is the 'Step 1: Select trusted entities' section, which displays a 'Trust policy' in JSON format. The policy allows the role to assume the role 'ec2.amazonaws.com'.

```
1 {
2   "Version": "2012-10-17",
3   "Statement": [
4     {
5       "Effect": "Allow",
6       "Action": [
7         "sts:AssumeRole"
8       ],
9       "Principal": {
10        "Service": [
11          "ec2.amazonaws.com"
12        ]
13      }
14    ]
15  }
```

The screenshot shows the 'Role nishal created' confirmation message at the top. Below it, the 'Roles (3)' section lists the roles created. The 'Roles Anywhere' section provides information on authenticating non-AWS workloads.

Role name	Trusted entities	Last activity
AWSServiceRoleForSupport	AWS Service: support (Service-Linker)	-
AWSServiceRoleForTrustedAdvisor	AWS Service: trustedadvisor (Service)	-
nishal	AWS Service: ec2	-

Roles Anywhere

Authenticate your non AWS workloads and securely provide access to AWS services.

Access AWS from your non AWS workloads

Operate your non AWS workloads using the same authentication and authorization strategy that you use within AWS.

X.509 Standard

Use your own existing PKI infrastructure or use [AWS Certificate Manager Private Certificate Authority](#) to authenticate identities.

Temporary credentials

Use temporary credentials with ease and benefit from the enhanced security they provide.

3) Comeback to the Elastic Beanstalk

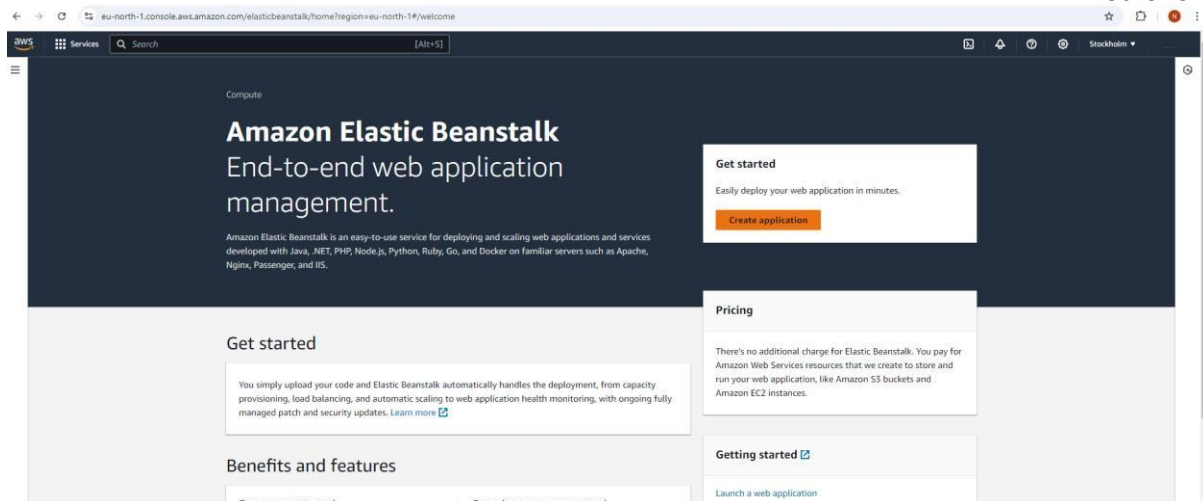

The screenshot shows the search results for 'elastic' in the AWS IAM console. The 'Services' section lists several services, including Elastic Beanstalk, Elastic Transcoder, Elastic Container Service, and Elastic Container Registry. The 'Features' section lists features for Applications, Environments, and Elastic IPs.

Services

- [Elastic Beanstalk](#) ☆
Run and Manage Web Apps
- [Elastic Transcoder](#) ☆
Easy-to-Use Scalable Media Transcoding
- [Elastic Container Service](#) ☆
Highly secure, reliable, and scalable way to run containers
- [Elastic Container Registry](#) ☆
Fully-managed Docker container registry: Share and deploy container software, publ...

Configure environment [Info](#)

Environment tier [Info](#)

Amazon Elastic Beanstalk has two types of environment tiers to support different types of web applications.

- ☒ **Web server environment**
Run a website, web application, or web API that serves HTTP requests. [Learn more](#)
- ☐ **Worker environment**
Run a worker application that processes long-running workloads on demand or performs tasks on a schedule. [Learn more](#)

Application information [Info](#)

Application name

Maximum length of 100 characters.

► Application tags (optional)

Environment information [Info](#)

Choose the name, subdomain and description for your environment. These cannot be changed later.

Environment name

Must be from 4 to 40 characters in length. The name can contain only letters, numbers, and hyphens. It can't start or end with a hyphen. This name must be unique within a region in your account.

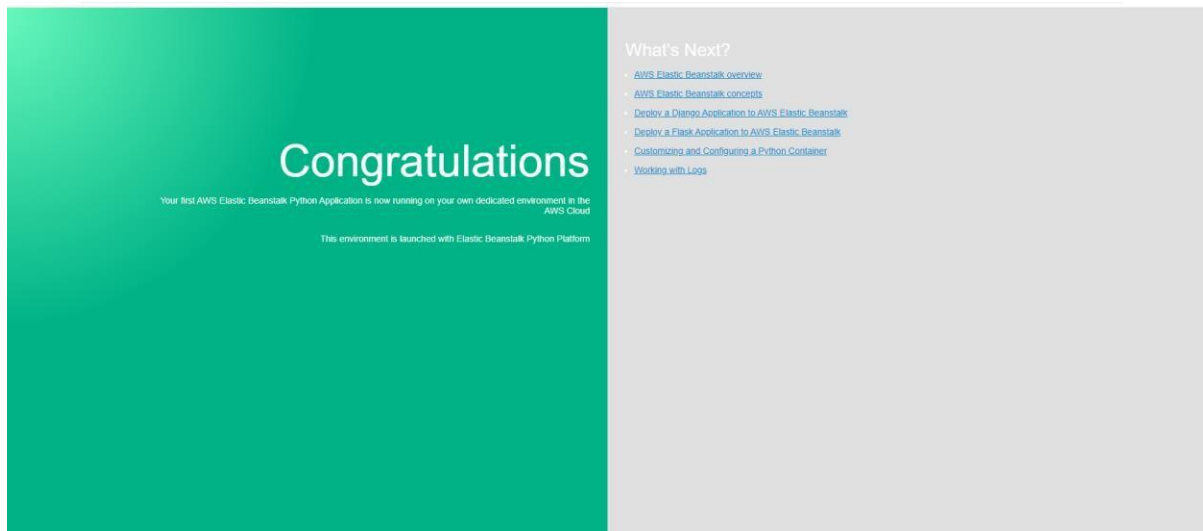

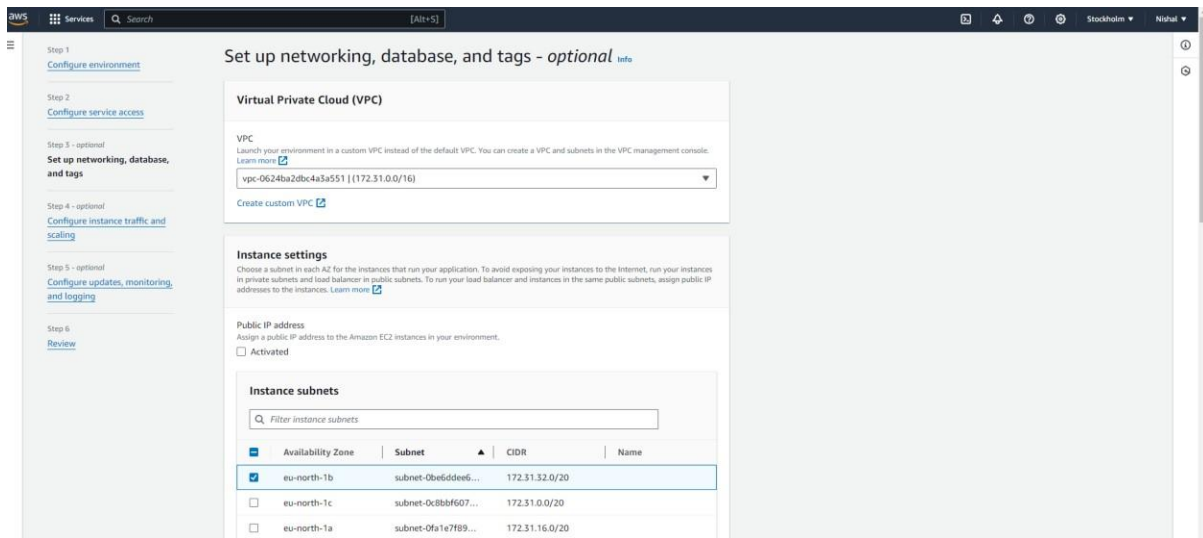

Domain

 .eu-north-1.elasticbeanstalk.com

Start from a preset that matches your use case or choose custom configuration to unset recommended values and use the service's default

Step 6
Review

Configure service access

Service access

IAM roles, assumed by Elastic Beanstalk as a service role, and EC2 instance profiles allow Elastic Beanstalk to create and manage your environment. Both the IAM role and instance profile must be attached to IAM managed policies that contain the required permissions. [Learn more](#)

Service role

☒ Create and use new service role
☐ Use an existing service role

Service role name

Enter the name for an IAM role that Elastic Beanstalk will create to assume as a service role. Beanstalk will attach the required managed policies to it.

View permission details

EC2 key pair

Select an EC2 key pair to securely log in to your EC2 instances. [Learn more](#)

Choose a key pair

EC2 instance profile

Choose an IAM instance profile with managed policies that allow your EC2 instances to perform required operations.
